Hello Mark,

This is April, the new hydro with the Division. I have been assigned the hydrology responsibilities for the Hiawatha mine. Additionally, I will also be splitting hydrology responsibilities with Jim Smith for the Bear Canyon mine.

I know that Pete Hess recently forwarded you an email inquiry I had regarding a couple of UPDES sample locations that appear to be inactive:

012 - Mohrland Pipe Drain

013 - King 6 Water Tank

and one I didn't include in the original email to Pete, but noticed later was

010 - King 4 Mine Discharge

According to your current UPDES permit (which is valid thru Sept. 30, 2009) sampling locations 003 thru 013 were at one time taken out of the permit, but then later reinstated in the current permit. Our database shows that all 13 sample points are active except these three. I was wondering if you knew anything about why these are currently listed as inactive? Does it mean that these points are not monitored monthly like the others? Let me know if you can provide some context on this issue. From what I can tell from the permit, it seems that they should be listed as active and monitored monthly.

Thanks very much.

April
